PROFESSIONAL SUMMARY

I'm a Data Analyst with a BSc in Physiology and hands-on project experience across healthcare, telecom, retail and airline operations. My science background taught me how to work with messy, real-world data before I ever touched SQL or Power BI. I build dashboards and reports that people can actually use to make decisions, not just look at. I care about finding what the numbers are actually saying, not just presenting them.

TECHNICAL SKILLS

Data Analysis: SQL, PostgreSQL, Microsoft Excel, Power Query, Exploratory Data Analysis

Visualisation & BI: Power BI, DAX, Dashboard Design, KPI Reporting

Analytical Methods: Customer Segmentation, Churn Analysis, Trend Analysis, Root Cause Analysis

Business Skills: Stakeholder Communication, Business Intelligence Reporting, Problem Solving

PROJECTS

Airline Operations & Delay Analysis Dashboard

Power BI | 2026

- **Processed around 2 million flight records** and found a 37.3% on-time performance rate with an average arrival delay of 42.2 minutes across major U.S. airlines.
- **Late Aircraft Delay was the single biggest disruption driver**, found through a comparison across delay categories, airlines and seasons.
- Built a multi-page dashboard so operations teams could track KPIs, spot trends and benchmark airlines without digging through raw data.

Telecom Customer Churn Analysis

SQL, PostgreSQL | 2026

- **Analysed 7,043 customer records across 21 variables** and found a 26.54% overall churn rate.
- **Month-to-month contract customers paying by electronic check were the most likely to leave**, giving the business a clear place to focus retention efforts.
- Identified new customers under 12 months as the most critical window for intervention and built segmented recommendations around that finding.

Sales Performance & Revenue Analysis

Microsoft Excel | 2026

- **Evaluated 1,000 sales transactions totalling N456,000 in revenue** and broke down performance by category, region and season.
- **Electronics generated the most revenue at N156,905 while Clothing led in volume at 894 units**, two different problems that needed two different strategies.
- Built an interactive dashboard tracking revenue trends, category performance and regional comparisons to support business planning.

Healthcare Readmissions Analysis

SQL, Microsoft Excel | 2025

- **Analysed 25,000 patient records and found 11,754 readmissions, a 47% rate**, with patients aged 50 to 80 with circulatory conditions as the highest risk group.
- **Identified the clinical and demographic patterns driving readmission risk** so teams could target the right patients early.
- Built a dashboard pulling together readmission trends, demographics, length of stay and clinical indicators in one place.

Customer Analytics & Segmentation Dashboard

Excel, Power Query | 2025

- **Processed over 100,000 customer records** with a combined purchase value of around \$963.5 million to support loyalty and marketing strategy.
- **Regular loyalty segment made up 60.14% of the customer base**, found through segmentation across income, education and product preferences.
- Built a dashboard so leadership could track loyalty composition, income profiles and product trends without needing an analyst to pull reports every time.

EDUCATION

Bachelor of Science (BSc) in Physiology | Graduated: August 2025

Chukwuemeka Odumegwu Ojukwu University, Anambra State

Relevant Coursework: Biostatistics • Statistics • Research Methodology • Data Collection & Analysis

CERTIFICATIONS

Deloitte Data Analytics Virtual Experience Program, Forage | 2026

HP LIFE Data Science & Analytics Certificate, HP Foundation | 2025

Open to full-time and team-based Data Analyst roles | Remote or On-site
