PROFESSIONAL SUMMARY

I'm a Data Analyst with a BSc in Physiology and over a year of hands-on project experience across healthcare, retail and customer analytics. I work across the full process, pulling and cleaning data, building dashboards and writing reports people can actually use. My science background gave me a solid foundation in statistics and research, and that's how I approach every dataset I work with. Making findings clear and useful matters as much to me as getting the numbers right.

CORE COMPETENCIES

Technical Tools: Microsoft Excel (Advanced) | SQL | Power BI | PowerPoint | Pivot Tables | DAX | Power Query

Analytics: Data Analysis | Exploratory Data Analysis | Statistical Analysis | Trend Analysis | KPI Development | Performance Monitoring | Data Storytelling

Data Management: Data Cleaning | Data Wrangling | Data Validation | Database Querying

Visualisation: Dashboard Development | Data Modelling | Business Intelligence Reporting

Domain Knowledge: Healthcare Analytics | Biostatistics | Retail Analytics | Customer Analytics | Financial Analytics

Core Skills: Analytical Thinking | Attention to Detail | Report Writing | Problem Solving | Communication | Teamwork | Stakeholder Management

WORK EXPERIENCE

Data Analyst, Independent Projects

2025 – Present

Self-Directed

- Ran multiple end-to-end analysis projects across healthcare, retail and customer analytics, handling everything from data collection and cleaning through to dashboards and final reports.
- Used exploratory analysis, statistical correlation, segmentation and KPI tracking to pull out insights from messy, real-world datasets.
- Built reports and dashboards for non-technical audiences so findings were easy to read and act on.

PROJECTS

Temu Ordering & Delivery Optimisation

Business Analysis | 2026

- Built a full Business Requirements Document covering the problem, requirements and success criteria for improving Temu's ordering and delivery system.
- Produced a Functional Requirements Document outlining system specs including payment security, order tracking and product selection features.
- Delivered a Business Case with a proposed solution, expected benefits, budget, timeline and risk assessment.

Sales Performance Analysis

Microsoft Excel | 2026

- Analysed sales and revenue data by product category and found that electronics drove the most revenue while clothing had high volume but consistently low margins, pointing to a pricing problem.
- Built an interactive Excel dashboard so stakeholders could compare revenue and volume across categories without touching the raw data.
- Turned the analysis into a written report with clear recommendations on pricing and bundling strategy.

Hospital Readmission Analysis

SQL, Microsoft Excel | 2025

- Queried and cleaned hospital patient records using SQL, finding a 47% overall readmission rate with risk concentrated in two diagnosis groups and specific age ranges.
- Built an Excel dashboard with pivot tables and dynamic slicers so clinical teams could explore readmission patterns on their own.

- Identified the highest-risk patient groups and presented findings in a way that directly supported decisions on post-discharge care.

Customer Analytics & Segmentation Dashboard

Microsoft Excel | 2025

- Analysed customer data across multiple segments and found geographic and behavioural patterns that weren't showing up in top-level reporting.
- Built a dashboard consolidating segment KPIs, trends and performance metrics in one place, cutting the time needed to pull routine marketing reports.
- Designed the outputs so non-technical team members could use the dashboard daily without needing analyst support.

Community Health Impact Analysis

Research Analysis | 2025

- Designed and ran a community health study on how generator noise exposure affects resident health, built the data collection framework, wrote the surveys and gathered the field data personally.
- Used statistical correlation to find clear links between noise levels and reported health issues.
- Delivered a structured report with practical recommendations on noise reduction, written for a non-specialist reader.

EDUCATION

Chukwuemeka Odumegwu Ojukwu University

Anambra State, Nigeria

BSc. Physiology

Graduated: August 2025

Relevant Coursework: Biostatistics, Research Methodology, Statistics, Healthcare Data Analysis, Data Collection & Analysis, Physiology Research Methods

Open to full-time and team-based Data Analyst roles | Remote or On-site
